

WHY REJUVANATE?

For millions of women, experiencing vaginal dryness, itching or burning is a common and frustrating condition. The time has come to alleviate the discomfort and restore vaginal health.

A series of (3) laser treatments with the Phoenix CO2 may improve vaginal conditions, such as painful intercourse, vaginal lubrication, itching and urination. Treatment time is usually less than 5-minutes and should be performed every 6-weeks.

REJUVANATE PRE PROCEDURE INSTRUCTIONS

Prior to having a CO2 laser treatment, a pelvic exam should be performed and the patient must have had a normal pap smear within the last 6 months.

Vaginal rest is recommended 3 days prior to treatment.

REJUVANATE POST PROCEDURE INSTRUCTIONS

Patients should be able to return to their normal daily routine following the procedure.

Vaginal rest for 3 days after treatment.

Post treatment, patients should keep the area moist. Extra virgin olive oil or squalene can be used. No petroleum!

Panty liners will help contain the olive oil and keep the area clean.

Be sure to pat, not wipe when going to the bathroom.

Clean 2X a day.

Pat the area with vinegar/water (you can find some at most drug stores or just do soaks at home) to relieve itching. Do not scratch!

Cleanse and re-apply moisture.
